# Technical Mobile App Report

In addition to realtime consultation, you will receive that kind of report after code review and app quality audit service.

Quick summary

✅ Ready for production

✅ Follows industry standards

✅ No major user-facing bugs

❌ More experienced team or developer needed for maintenance

Code style

✅ Well organized packages

✅ Logic separated from presentation layer

✅ Code styling follows official Android Guidelines

❌ Unused classes and components present

Dependencies

✅ Using newest official core components from Android SDK

✅ No known vulnerabilities present in 3rd party dependencies

❌ Outdated versions of networking client dependency

App localization

❌ Hardcoded texts present - may cause app translation process difficult

❌ Not ready for displaying RTL (Righ-To-Left) writing systems

Automated tests

✅ Unit test coverage in place for crucial components

✅ Few integration tests present

❌ Lack of end-to-end automated tests

Bugs & potential issues

‼️ While creating password, 8 characters is needed, but error message states that there should be 7

‼️ App may freeze while network connection is broken

❗ Images may overlap text on smaller screens

In addition to UI bugs descriptions, you may also get screenshots or videos of failing scenarios.
